

# Migrate Oracle Waveset (Sun Identity Manager) to Oracle Identity Manager with intragen

## Reduce the cost and time to migrate

Identity management solutions touch many areas of your business. Automated migration vastly reduces the effort in replicating your entire solution on a new platform, lowering costs and time spent. Intragen can reduce your migration time from weeks or months to days.

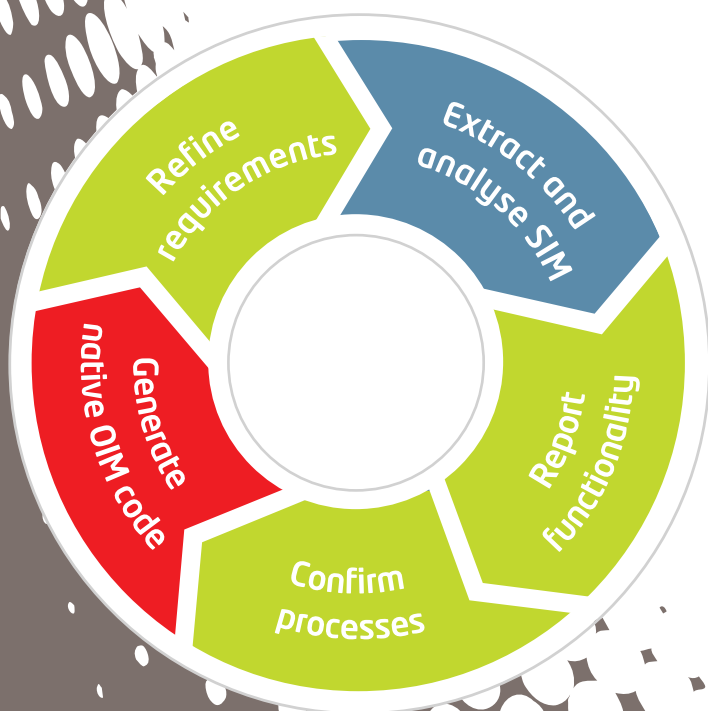

## Intragen Migration Accelerator for Oracle Identity Manager

Leverage the investment in your existing Sun solution quickly, cost-effectively and accurately.

## Gain full benefit from new Oracle features

Benefit from new Oracle features to enhance your existing Sun Identity Management solution with Intragen's skills and experience.

## Intragen Migration Accelerator

### Build Oracle Identity Manager server platforms

- Create Oracle Identity Manager servers and migrate resources, attributes and policies

### Migrate, consolidate and synchronise data

- Migrate Users and Accounts to your Oracle Identity Manager installation, consolidating user data in the meta data repository

### Leverage existing implementation by capturing and documenting implemented business processes

- Extract and analyse your existing Sun Identity Manager rules, workflow and forms
- Confirm the business processes built during the first implementation
- Generate new Oracle Identity Management objects, review new requirements and adjust processes
- Leverage new Oracle Identity Manager features to maximise your return on investment

## Intragen Migration Accelerator for Oracle Identity Manager

### ▶ Extract and Analyse

Our tool examines existing code in the repository for modifications to the Sun configuration. The differences from standard objects are analysed and stored

### ▶ Report Functionality

Configuration changes and code are displayed as logical processes: Joiner/Mover/Leaver; Self service and delegated administration. This allows the process, data elements and business rules to be examined.

### ▶ Confirm Business Processes

These reports allow stakeholders to confirm how processes have changed and correctly reflect the organisation's wishes.

### ▶ Generate Native Oracle Code and Objects

Using the Oracle API, objects are created within Oracle Identity Manager to deliver the desired functionality.

### ▶ Refine Requirements

With the core functionality available, detailed corner case requirements can be added via the configuration tool. All code generated can be added into your version control system.

## Take advantage of new features in Oracle Identity Manager with Intragen Accelerator for OIM

**Intragen Accelerator for OIM generates 100% native Oracle Identity Manager code, easy to maintain and evolve.**

Intragen Accelerator for Oracle Identity Manager transforms Identity Management implementations. This is a comprehensive approach that helps manage the whole migration project, including pre-migration analysis, migration and post migration, and helps reduce project time and cost by up to 90%, eliminate errors associated with manual processes and greatly improve the overall quality of work. Customers typically begin the testing of the upgraded application in three to ten days and see major project time savings.

After the migration, you can continue to use the Intragen Accelerator for OIM to maintain your application with its Application Impact Analysis functionality. Most customers see cost savings of well over 30% on their ongoing projects. Moreover, the framework provides an ideal platform to re-engineer Sun Identity Manager Forms and Reports to meet the requirements of today's new software architectures.

In addition to the tool, clients will have the benefit of vast migration experience of Intragen to help them plan and complete the migration project. Intragen also provides full turn-key migration services for those who need to outsource the project. Our proven track record and ability to understand business as well as technology makes us a valuable partner for your Oracle projects.

### Technical Summary

- Based on the native API from Sun Microsystems and Oracle to ensure compatibility
- Extracts code and configuration from Oracle Waveset (Sun Identity Manager) 5.0 to 8.1.1
- Deploys to Oracle Identity Manager 9 and later releases including OIM 11G R1

### About Intragen

- Intragen was the leading partner in Identity Management for Sun Microsystems for Benelux for 2008 and 2009.
- Intragen has continued that success as the Oracle partner of the year 2010 for Commercial Market Technology.
